

Allestree. 1637.

A New Alma-  
nack and Prognosti-  
cation, for the yeere  
of our Lord God,  
1637.  
Being the first after Leape  
yeere.

Calculated and properly re-  
ferred to the Longitude and  
sublimity of the Pole Arctick  
of 51. deg. and 32. min. And  
may generally serve for the  
whole Ile of Great Brittain.

*Mutuo pro temporum ratione.*

By Richard Allestree.

Printed at London by T. Cotes, for the  
Company of Stationers.

*Ad huius Libri Prognostici amici sui charis. M<sup>ri</sup>.  
R. Allestree Lectorē carmen Prognosticon.*

**S** Telliferi secreta Poli non parva recludit,  
Et manifesta facit parvulus iste liber.  
Vana superstitio nulla hic, ars impia nulla,  
Istalicet rabido Zoilus ore crepat.  
Cuncta Deo subsunt, Cælumq;, Solumq;, Salumq;,  
Quæq; juber facient Sidera, terra, mare :  
Prima Deus causa est, causæ sunt Astra secundæ,  
Nil, si prima veter, causa secunda valet.

*H. B.*

*Ad amicū suū candidū Richardū Allestree.*

Æthere nonne Deo placido tu missus ab alto ?  
Error erit levior si peccem talia fando.  
Nam sapis alta : putet nemo quin astra, reliqua  
Terra, summa petas, tibi quod via nota per Ordes  
Volutes; non obstabunt tibi prætereunti,  
Æthereq; domus, ni ut servo gratificentur.  
Te tamen ipse precor, populo dum sicut amicus,  
Illuc ut serus redeas optoq; fruëris,  
Vita permultos ter læta dicere menses,  
Crimen ut ignoscas mihi : desine Musa canendo.

*Rob. Woodford.*

A necessary and perfect rule for ever to know  
when the 4. Termes begin and end: and how  
many Returnes are in every Terme.

Eight dayes before a Terme shall be,  
The Exchequer openeth certainly,  
Except the Terme of Trinity,  
Which openeth but 4 dayes before assuredly.

1 Hilary Terme beginneth the 23 day of January (if  
it be not Sunday) but then the next day after, and endeth  
the 12 or 13 of February, and hath 4 Returnes.

Octabis Hilarij	}		}	Crastino Purificationis.
Quind Hillarij	}		}	Octabis Purificationis.

2 Easter Terme beginneth 17 dayes after Easter, and  
endeth 4 dayes after Ascension day, and hath 5 Returnes.

Quind. Pasche	}		}	Mense	}		}	Quind Pasche.
Tres Pasche	}		}	Pasche	}		}	Crastino Ascensionis

3 Trinity Terme beginneth the next day alwayes af-  
ter Co-pus Christi day, and endeth the wednesday four-  
night after & hath 4 Returnes. Note that Corpus Christi  
day is alwayes the Thursday after Trinity Sunday.

Crastino Trinitatis	}		}	Quind. Trinitatis.
Octabis Trinitatis.	}		}	Tres Trinitatis.

4 Michaelmas Terme begins the 9 of October (if it  
be not Sunday) and endeth the 28 day of November,  
and hath 8 Returnes.

Octabis Michael	}		}	Crastino Animarum
Quind. Michael	}		}	Crastino Martini
Tres Michael	}		}	Octabis Martini
Mense Michael	}		}	Quind. Martini.

In my Calendar following you shall finde both the be-  
ginning and ending of the Termes, and all the Returnes  
set do one upon the dayes of the month that they fall up-  
on this reere. 1627.

Dominicæ post Trinitatis, 24

Charles our Soberaigne King, did begin his reigne  
over Great Brittain, Anno 1625, March 27. and hath  
reigned 12 yeeres compleat this yeere, 1637, March 26.

Veneris ingens sidus, cum ante graditur Solem *propter*  
Græcè, Lucifer Latinè dicitur; Cum subsequenter, & ab oc-  
casu refulget, vesper, vesperugo; & *scorpi* appellatur.

This Golden planet Venus is Orientall, from the first  
day of January this yeere 1637, unto the 5 of July fol-  
lowing and so long this yeere she is Orientall, rising before  
the Sunne in the morning, and therefore called Lucifer,  
and the glittering morning Starre. And all the rest of  
yeere else, she is Occidentall, setting after the going down  
of the Sunne, and therefore termed Hesperus vel Vesper  
that is our glittering Evening Starre all this winter.

A most plain and easie Table shewing the true  
time of the beginning, continuance, and yeares, since  
the reigne of each King & Queene in England, from the  
Conquest, vntill this yeare, 1637. Gathered forth of  
Chronicles, and set forth for profitable vse of  
Lawyers, Scriveners, &c.

The Kinges names.	Began they reigne.	The time they reigned.	Since they reigne.

## A true definition of naturall Astrologic by the Author.

*Astrologia vera ac erudita physica pars est, inquirens proprietates, vires, effectus ac significationes stellarū, quas in elementari natura & microcosmo excitant, non quidem curiosē & superstitiosē, sed verarū observationū & rationalis experientiae testimonijs, idq; per certas hypotheses artisque principia & Phaenomena. Horum principiorū naturā & demonstrationē generalē ob oculos ponet doctrina Spherica. Est enim cælum vehiculū divinae virtutis, quo, mediante motu & lumine stellarū tanquam causis secundis, Deus cuncta hac inferiora gubernat & disponit. Non tamen necessitant absolute, sed conditionaliter, & inclinant fortiter.*

In the 7. or last colum of this my Almanacke, in the next page, titled in the head of the Colum, the hour & min. of Sun rising for euery day in the yeare at London: which houres and minutes are halfe the length of the same night. For example: the 1 of Ianuary, the Sunne riseth at London, at 8 of the clocke, and 4 min. after: that length being doubled, makes 16 houres and 8 min the length of that night. And to know the time of the Sun-setting in the same place through the yeere take the houres and min. found in the Almanacke for Sunne-rising from 12. and you shall have the Sun-setting left. which being doubled, is the length of that day. Example: Ianuary the 1 day aforesnamed, the Sunneriseth at 8. and 4 min. take 8. after. Take these 8. and 4 from 12. and there resteth 3 houres, & 6 min. for Sun set that day, the houre of 3 and 4 min being doubled maketh 6. houres, 8 min the length of that day, and so of all the rest. This is very easie.

Memorandum, that Easter day, falleth on the 25 day of March, or the Lady day, the next yeare, 1638. And then once againe, An. Dom. 1649.

January hath xxxj dayes.

# February hath xxviii. dayes.

*The description of the Sanguine people.*  
 The bodies where heate, and moysture dwels,  
 Be sanguine people, as Galen tels;  
 With visage faire, and cheek's rose ruddy,  
 Their sleep's are much, and dreames be bloudie.

# September hath xxx. dayes.

*The Melancholicke complexion.*  
 Melancholy is cold, and very dry,  
 As here in verse, his signes will try,  
 Haire plaine, and very thinne,  
 A leane wretch, with hardnesse of skinne.

*The use of this Table with a Caution.*

Doe but observe in the sixth columnne of the Almanacke the houres and minuts of full-sea at London-bridge over against each severall day of the moneth, to or from which time there noted; adde or substract such houres and minutes as this Table above doth appoint, and the totall of the one, or remainder of the other shall be the time of full sea, at any of these places abovesaid, salved the Anticipation or protraction of time, which by the winds, Land-floods, or Moones latitude, may be caused, which may be an houre, or sometimes more or lesse error, according to their scite and quantity, a thing very remarkable of Seamen when they passe by any Sands, over any barren haven, or such like.

*Allestree. 1637.*

# An Appendix unto the precedent Almanacke, for this present yeere of Grace. M.DC. XXXVII.

Wherein you may observe a briefe  
Chronology of yeeres: A De-  
scription of all the Eclipses of the Sun  
and Moone, which are to be seene  
this yeere; beyond the Seas. But  
not in our Horizon in  
great Brittain.

Astronomicall Calculations: Physicall  
notes, and notes of Husbandry, and Gar-  
dening, with a Chronography of  
the foure quarters of this yeere.

Usefull and pleasant for all those which are de-  
sirous of such a worke.

By RICHARD ALLESTREE.

God maketh the Lightning with Water, and  
bringeth the Windes out of his Treas-  
ures: Ier. 10. 13. Thus nature is an Order  
prescribed and set downe by God.

LONDON,

Printed by J. L. for the Company of  
Stationers. 1637.

Allestree. 1637.

Vpon what dayes, the Faïres of the  
Borough of Derby are kept, this pre-  
sent yeere, 1637. as followeth,

- The first is vpon Friday in Easter=weeke.
2. The fourth and fift dayes of May.
3. The Friday in Whitsun=weeke.
4. The Friday before Midsummer day, being  
this yeere the 23. of June.
5. The 25 of July, being S. Iames day.
6. The 26. and 27. dayes of September.

A ready and true Rule or Dyall, to know  
what a clocke it is thorow the World, day  
or night through the yeere.

Any two being together, let one of them  
take up from the ground some one thing, what  
he pleaseth, and give it you.

If the thing have growne, and may grow? A clocke  
as seeds, hearbs, or such like, it is § 1. 4. 7. or 10.

If it never grew, nor ever shall, as stones,  
metrals, pot=heards, or such like. It is § 2. 5. 8. or 11.

If ever it did grow, and may not grow a-  
gaine, as sticks, chips, shels, or such  
like, it is § 3. 6. 9. or 12.

But remember this Caution, that both hee that giues  
judgement, and he that taketh up the thing, know  
not what houre it is before they try the matter.  
*Nil tam diffidit, quod non solertia vincat.*

 A great dearth, and putting downe of the  
 fallow in the yeere, 1631.

A declaration of all the Eclipses which are  
made in the Sunne and Moone this yere 1637.

**T**H E two Luminaries this yere will suffer  
three times the losse or refection of the light,  
which they usually impart to the earth, twice the  
Sunne, and once the Moone, beyond the Seas:  
but none of them are visible in our Horizon in Eng-  
land.

The first Eclipse of the Sun will be on the 16.  
day of January, according to our Julian or Eng-  
lish account: but on the 26 day of the same moneth,  
according to the Gregorian or forraigne Computa-  
tion, it will appeare every where in Asia, from  
the Orientall Sea, in Campaa, Camboia, Malacca,  
and in the region of Malabarus. The digres eclipsed  
are 11. 10. min. 12. sec.

The second Eclipse is of the Sunne, it will be  
on the 17. day of Iuly, according to the Julian or  
English account: but on the 21. day of the same  
moneth, according to the Gregorian or forraigne  
Computation; it will be conspicuous in the Occi-  
dentall continent, which doth containe America,  
chiefely those parts nigh the Equator, as new  
Spayne, Iucatan, &c. And in the adiacent Ilands  
of Coco: and also in the Region of Peru. The  
Digres eclipsed are 17. 18. min. 8. sec.

The third Eclipse is of the Moone, it will be  
on the 21. day of December, according to the Jul-  
ian account or English: but on the 31. day of the  
same moneth according to the Gregorian or for-  
raigne Computation: This Eclipse will appeare  
to our Antipodes, and Periceis; that is, to our  
Counterparts, in respect to us: or as you may  
say, like dwellers. This Eclipse beginneth at  
our 10. a clocke, and 3. minuts after. The mid-  
dest of it is 13. minuts before our high noon. The  
end at one a clocke, 11 minuts after noon. It

which time the moone will be out of our sight  
North under the North Pole: So that none  
of these three Eclipses are to be seene in  
Britaine.

Saturne is Direct from the beginning of the  
yeere to the 25 of Aprill, from thence Retrograde  
to the 13. of September: all to the yeeres end he is  
Direct.

Jupiter is Retrograde from the tenth of January  
unto the 13. of May: all the rest of the yeere he is  
Direct.

Mars is in his Direct motion all this yeere.

Venus is in her Direct motion all this yeere.

Mercury is Retrograde from the third of March,  
to the 27 of the same moneth, and from the 21 of  
June, to the 22 of Iuly, and from the 21 of October,  
to the 12 of November, all the rest of the yeere  
he is Direct.

The true or apparent magnitude of the Sun  
call yeere, is 365 dayes, 5 hou. 55 scup. 37 sec. 9  
thirds.

And according to the Prutenicall tables, it begins  
with the 10 day of March, the 12 hou. 31 min. 11 sec.  
in the afternoone Astronomically: at which time  
the Sun entereth the first intn. of the Equinocti-  
all signe Aries, making equall day and night.

Direction, is the progression of a Planet ac-  
cording to the succession of the signes, which is made  
from the West unto the East: as from Aries into  
Taurus, and from Taurus into Gemini, &c.

Retrogradation, is a motion of a Planet con-  
trary to the succession of the signes, from  
East into the West, as when a Planet returneth  
from Taurus into Aries.

Stationary, is a motion of a Planet, when  
resting quiet, viz. when a Planet standeth  
neither towards the East, neither towards  
the West in the Zodiacke. A Planet is said to be  
Stationary.

Oriental, when in the morning it riseth before the Sunne: and Occidental, when it setteth after the Sunne.

The line Eclipticke is a circle in the very middle of the Zodiacke, vnder which the very middle of center of the Sunne with continually mooue.

Latitude is the height, or lowenesse or distance of the Planets or Stars from the Ecliptick, and this is either Northward or Southward.

Altitude of a Planet, is the motion of such a Planet, in which it is carried from his lowest place of Heaven, or from the center of the Earth, into the most highest place, or vnto the top of his circle, when a planet is said to be in apogee, that is, in the most highest point, and most remote from the earth.

The Lowenesse of a Planet, is when as he is placed in the opposition of his Age, and then he is said to be in Perigee, and the neereſt point to the center of the earth, for these two places is said to bee the highest & lowest places of the Planets, the which are named Abidesumma, & minima Apogeeum, & perigeum.

Epicycle est vocabulum artis, used in Astronomy, it significth a lesser circle, whose center or middle part is in the circumference of a great circle.

In the upper part of this Epicycle, the 5 Planets, Saturne, Iupiter, Mars, Venus, and Mercury, doe move forwarde according to the course of the signes, as from Aries to Taurus, &c. But when they are in the lowest part of it, then they are Retrograde, (as I haue said a little before) that is, mooueth backward, as from Gemini to Taurus so from Taurus to Aries.

Vacat. or both of course, is when the Moon or any other planet is separated from a planet, and not bound to another during his or her residence in the signe. Coniunctio or hold, is when the Moone or any other planet is in a signe, & not aspected of another.

The

The Golden number of Prime, is the number of yeeres, in which time the Sun and Moone maketh all the variety of their Changes, Fulls, and Quarters.

Epaque, is the 11 dayes & 3 houres, which are added to the yeere of the Moone, being 364 dayes, to make it equal with  $\frac{1}{2}$  yeere of the Sun, which consisteth of 255 dayes, & 6 houres. By the Prime is found out the Epaque, & by  $\frac{1}{2}$  Epaque is found out the age of  $\frac{1}{2}$  Moone.

The Circle of the Sun, is the number of 28, because that in 28 yeeres, all the variety of the Dominicall letters and like yeeres are expired, and the 29 yeere the said Circle doth begin againe.

The use of which number is to finde out the Dominicall letter for any yeere past, present or to come.

Horizon, is a great circle, diuiding that part of the heauens which we see from the other part which we see not.

A perfect Rule to know in what Signe and degree the Moone is in, and how farre distant shee is from the Sunne, in any day in the yeere without booke.

**M**ultiply the age of the Moone by 4. Divide the Product by 10. (doe so alwaies) the Quotient sheweth the Signe and degree that the Moone is in: and how far shee is distant from the Sun. The remainder if there be any, multiplied by 3. bringeth degrees to be added. You must put these signes and degrees to the Signe and degree that the Sun is in, the Product of all these Signes and degrees, in order being counted from the place of the Sunne: sheweth the place of the Moone in the Zodiacke. Example: this year 1637. March the 12. the Moone is 15. dayes old. I desire to know in what signe & degree the Moone

is in that day: I multiply 17. by 4. & they make 60. I divide that 60. by 10. and the Quotient is 6. which notes the Signe the Moone is in, and also that the moone is full 6. signes from the Sunne. Now the Sunne was the 12. day of March in the signe of Aries the 2. degree. from which signe and degrees I count 6. signes: which falls in Libra the 2. degree, the signe of the Scales and Royes. And so of all the rest.

Anatomy of wonder great I speake,  
and yet am dead,  
Men sucke sweet iuice from these blacke veines,  
which mother wisdome bred.

### A Chronography of the 4. Quarters of this present yeere. 1637.

**T**he Hyemall Solstitiall, or winter Quarter did begin Astronomically, the last yeere 1636. Dec. the 11. day, 9. hou. 27. min. in the afternoone, at what time the Sun entred into the 1. min. of the imaginary signe of cold & earthy Capricorne, being then declined from the Equinoctiall, according to the obseruation of Tycho de Brache, 23. degrees, 31. min. 30. sec. to the Southward: at which time the dayes be at the shortest, and nights at the longest with vs in England.

3. Equinoctium vernum: or our Spring Quarter, beginneth with vs Astronomically March 1. tenth, 12. houres, 32. minutes, in the afternoone: at what time the rubeo resting Sun entred into the first minute of the Equinoctiall and fierie signe Aries, making the day equall with the night, that is, betwixt Sun-rise, and Sun-set; and Sun-set and Sun-rise.

3. Solstitium Aestivum: or our Summer Quarter beginneth with vs according to Astronomy, the 21. day of June, at what time the Sun entred into the 1. min. of the 22. degree of the signe Cancer, which is the first degree of the signe of the Crab.

June, at 7 a clock, 58 min. afternoone: at what time the Sun entereth into the 1 min. of the imaginary water cold and moist signe Cancer, then the Sun maketh his greatest Northern declination, at what time is our longest day and shortest night in all the yeere.

4 Autumnall Equinoctiall, our Autumn: 02 March Quarter with vs, beginneth Astronomically, the 12 day of September, 20 houres, 1 min. in the afternoone, at what time Titan, 02 Lux publica mundi, entereth the 1 min. of the imaginary, hot, moist, & atery signe Libra, which maketh againe our nights and dayes equall, or alike, as in the 10 of March.

Qui sapit, ille animum fortunæ præparat omni,  
Præsumptumque potest arte levare malum.

### Presages of weather, by the Raine-bow.

**T**he naturall signification of the Raine-bow is every thing fitted to shew raine either past, or to come: for if it stay or abide in the midday, or noone-tide (which it cannot do except in the night) sheweth then warning of very great raine to come; if the be observed to be seene in the East, it sheweth warning of thin & small raine to come shortly: as a raine-bow did which I & one other man did see, 1632. December, the 16 day at night about 7 a clocke South-west, which did come from the disposition of the Moone, for hee was at the full the same day at high noone before: this is very true, much small raine did fall two or three daies after, & continued many dayes. But if the be seene in the East, hee signifieth raine past by and by, and that it will quickly cease, and faire and cleere weather to come. Alijsic efferaunt: If the Raine-bow shall be seene before noone, hee signifieth the matter of raine to be consumed: If hee shall bee seene after noone, or about mid day, hee declareth that raine is

at hand, for because that the vapours be not as yet  
dissolved or wasted. If two Rain-bowes appeare  
at one time, they give warning of raine within  
1 or 2 dayes after. If Raine-bowes presently after  
long raine, sheweth faire weather presently after.

*Predictions of weather, according to holy Scriptures.*

1. **A** Cloud rising out of the West foretelleth  
raime, Luke 12. 34.

2. And when ye see the South wind blow, ye say,  
there will be heat, & it cometh to passe, Luk. 12. 55.

3. When it is Evening, ye say, It will be faire  
weather; for the skie is red, Mat. 16. 2.

4. And in the morning, It will be foule weather  
to day, for the skie is red and lowring, Mat. 16. 3.

5. South winde or great heat in the Summer,  
foretelleth whirlewinde, Job 37. 9.

6. Winde in the North predicteth cold wea-  
ther, Job 37. 9.

7. The North wind bringeth a day raine, Pro. 25. 13.

8. The sweet influences of Pleiades or 7. Starres  
in the 24. and 25. degree of Taurus, with the Moon  
both bring raine, and the Sunne with Orion in the  
17. degree of Gemini, Job 38. 31. bringeth raine.

*Astronomical Elections briefly described for  
administration of Physicke.*

Salomon saith, To every thing there is a season, and a time  
to every purpose under the Heauen, Ecclesi. 3. 1.

**L**oving Reader, I wish you to looke & compare  
my book 1631. with this present, & you shall get  
light for this your purpose, which you cannot get in  
any one Almanack yet extant. See ye ad rem redam.  
In the administration of Physicke, are chiefly to be  
observed 2. things, viz. the time, the age, & the manner  
of administration. For the election of time, conside-  
ration is to be had both to the Moon in the Zodiacke: &  
that

*Doc 38-31  
of the North  
of the South  
Doc 37-22*

It be not in extremity, either of heat or cold; & then  
 for, Hippocrates part 2. p. 6. & 45. aphorisme, saith, **Q**uod  
 & Spring & Autumn are more profitable for phy-  
 sick, then Summer or Winter: for in Summer the  
 humours boyle, by reason of heat some yeers, of caus-  
 ing great annoyance to mens bodies: yet if necessary  
 purge to take Physicke in summer, it is best in my  
 conceit, to be taken by vomit; & in winter (if necessary  
 do require) by Purgation. And as the famous Phi-  
 losopher Hermes saith in his Iacromathematikes, Lu-  
 na verò stella (five benefica five malefica fuerit) utrius  
 applicuerit, illi suffragabitur: Concerning the age, you  
 are to understand, & decrepit old age, & infants, are  
 unfit to haue Physicke administered vnto them: And  
 it is also dangerous in youth: for as a learned Phy-  
 sician saith, he that taketh much Physicke when  
 he is young, will much repent it when he is old.

And lastly, for the manner of Physicks admini-  
 stration, Albumazars iudgement is, that the fittest  
 times for Purgations, are to be elected according to  
 the motion of the Moon in watry signes, as in Can-  
 cro, Scorpio. & Piscibus.

Some hold opinion, that the first halfe of Libra  
 & Aquarius are fit times: And also when the Moone  
 is vnder of course (which is alwaies to be found in  
 my Almanacke exactly) it is an indifferent time to  
 take purgatiue medicines.

<p>Prepare humours,          Vomit,          Purge by freezing,          Take Clusters,          Take Gargarismes          Stop rumes &amp; flux          Bathe for diseases,</p>	<p>the          in</p>	<p>Gem Lib. or Aqua.          Ariet. Tau. or Cap.          Can. Leo. or Virg.          Ariet. Lib. or Scor.          Cancro, or Ariete,          Tau. Virg. or Cap.          Ariet. or Sag.</p>
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Purge with Electuaries, Potions, or Pilles, the  
 Moone in Cancro, Scorp. or Pisc.

And in  $\Delta$  not combust, is good to auoid  
 Cholera  
 is good to purge Phlegme

p in ♄ in ☿ good to purge Chollic  
 a \* 01 Δ } ☉ good to purge Phlegme } with  
 aspect of ♄ good to purge Melancholy } ☿  
 d in ♄ in ☿ good to purge Chollic  
 a \* 01 Δ } ☉ good to purge Phlegme } with  
 aspect of ♄ good to purge Melancholy } ☿

Note also that Venus bee not combust (that is,  
 when she is within 15. degrees of the Sunne, either  
 before or after him:) And the Coniunction, Quar-  
 tile, or Opposition of Saturne, Iupiter, or Mars, either  
 to the Moone or betweene themselves, for they hin-  
 der the operation of Physicke. Use no purging me-  
 dicines when the Moone is ioyned with ♄: for the  
 effect thereof will be abated by reason of Iupiter, be-  
 ing her, and moyst; in which quality consisteth the  
 vigour of life and nature.

The learned Physician will consider the Aspects  
 of the Planets, and some fixed Starres within the  
 Moone, and diuers other observations Astro-  
 nomical, for the necessary & conuenient administration of  
 Physicke. In regard whereof, and of thine owne  
 bodily health and strength, I woth thee that thou  
 refuse not his counsell, lest thou repent with, Had  
 I wist.

And note generally, for Phlebotomy a speciall  
 helpe sometime in administration of Physicke; that  
 it is not conuenient either for a very leane or fat  
 man, nor a child of 14 yeres, or an old man a-  
 bove 56 to be let blood.

For the } Plegmaticke, } The } Ariete or Sagis  
 spleen } Melancholich, } Moone } Libra or Aquar  
 tion, let } Cholericke, } being } Cancri or Pisc  
 blood } Sanguine. } in } either of them.  
 For his } Youth, from the change to the 2 quarter.  
 age, let } Middle age, from the 2 quarter to the full  
 blood } Elder age, from the full to the 3 quarter.  
 in } Old age from the 3 quarter to the change.

Tempus Anni, Spring good, Autumne indifferent.  
As concerning the time of the yeere, wherein blood  
should be let, it is not a little to be regarded. For all  
such as are subject to incur these sicknesses and dis-  
eases following, namely: Apoplexiam, Epilepsiam,  
Phrenitidem, Vertiginem, Podagram, Tussim, Scabiam,  
Anginam, Pleuritidem, Ophthalmiam, Febres, Rup-  
ram Venae, Inflammationes Viscerum, &c. Item qui  
retinentur ac sistuntur vacationes sanguinis con-  
tra, vt Hemorrhoides, & menstrua. All these ought to  
be let blood, chiefly in the Spring time. But here  
also must be used discretion and consideration, for  
not in all these sicknesses, neither in every of these  
persons, ought blood letting to be used, but in such  
and to such, as necessity requireth. And according to  
the learned, the very hot or cold times of the yeere  
must be regarded in opening a veine: for saith Hy-  
pocrates, Aphor. 5. li. 4. Sub cane & ante canem, di-  
ciles sunt medicationes.

Tempus { The Moon in Tau, Gem. Leo, Virg. Capri-  
menis. { The day before and after change & full.  
Let not { 12 houres before and after the Quartan  
blood. { The Moon in Iupiter or J. euill aspect.  
Tempus diei, the Morning after Sun rising lasting  
Afternoone, after perfect digestion: The aire tem-  
perate, the winde not South, if it may be.  
In these aspects following you may safely open a veine.

△ { Of the Moon to Iupiter or Venus, not combust.

\* {  
□ { At the Moon to Iupiter or Venus, not combust, is  
a { the Moon be in some good signe.

First prepare, & then purge, Anger stabili perage  
make & beare clean before you can hope to do any good.

An Unguent or Plaster is best applied. When  
the Moon is in the Imaginary signe attributed to  
the number whereunto it is applied.

Alcibee. 1637.

Certaine briefe Rules for Husbandry, Gardening, &c. superstitiously attributed to the Moone, moving under the 12 signes of the Zodiacke.

**T**he plants considered in my booke, 1630. The best time to plant, and graft in, is in the increase of the Moone in Taurus, Aquario, or Capricorne; and not opposed by ♄, ☿, or ♀, of Saturne, or Mars.

Good to sow all manner of Cereals, the Moone in Cancer. Sow Onions and Leekes, in February or March, at the wane of the Moone.

Sow Cabages in February, March, or April, in the wane of the Moone: replant them in the decrease.

Sow Cabage, Lettise in February, March, or July, in the old of the Moone.

Waters in these twelve roots be round, 2 or 3 digges before the full, but to sow for Use, take the increase from February to June. Gather Apples and other fruits, herbs and flowers, to have them in most beauty, and greatest vertue, the Moone at the full. Sow or set Garlick, Lettice, Parsneps, Carrots, Beets, and Beanes, this dozen before or after the full Moone.

Good to set all kinde of Dutch-let, from September, till March. Dung your Land, that weeds may not abound, in the last quarter.

Sell Timber for building, from Midsummer to Christmas, in the wane of the Moone.

Cut Copies of Kewell, in the first quarter of the Moone. Cut Wines in February or March.

Remoue trees the last quarter of the Moone, betweene Hollandside and Elmfield.

Good to kill or geld Cattell, when the Moone is in the Head, Thighes, or Knees.

An

An Abstract of a direction, concerning  
*Real Contrails.*

**V**Whoever shall desire to purchase, or put to Sale, to take Lease, or let to Farme, to Grant, Assign, Exchange, or otherwise to Contract, or Deale, with, or for any Lands, Leases, Rents, Annuities, Mansion-houses, Offices Saleable, or other Estates of what yeerely value soever, or to save any from danger, or Forfeiture, through the want of present money: May either in their owne names, or in the name of any other trusted by them, have secure meanes with all privacy requisite for the speedy effecting what shall be desired, in any the Cases aforesaid, or the like: At the Porcht-house against Saint *Andrewes* Church in Holbourn
